RESTRICTION

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

- I. Claims 1-14 and 24-29, drawn to a system for obtaining modalities of scanning probe microscopy (SPM) and receiving parameters, physical structure of the images classified in class 382, subclass 128.

- II. Claims 15-23, drawn to a system that applies the analysis steps to the SPM images, classified in class 382, subclass 133.

2. Inventions I, and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as the process of receiving modalities of SPM, parameters and physical structure of images. Invention II has separate utility such as further analyzing the SPM images from the received data. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 2623

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
